// STEP-BY-STEP GUIDE

how to use

GOOGLE DREAMBEANS

Set up the Google Labs app that turns your Google apps into a finite set of daily, AI-illustrated stories.

12 STEPS · UPDATED 3 NOV 2026

CHECK KAR LO

What it is

Dreambeans is an **experimental Google Labs app** for **Android and iOS**. It uses Personal Intelligence to read the Google apps you connect, then makes a **finite set of daily stories** with AI artwork. It is not an endless feed.

Who can use it

- **India:** launched 2 Nov 2026, its first market outside the US. **Personal Gmail accounts only**; enterprise accounts are excluded.
- **US:** open to Google AI Plus, Pro, Ultra and consumer accounts since September 2026.
- **Not in your store yet?** Join the waitlist at labs.google/dreambeans with a personal Google account.

You will need

- An Android phone or iPhone
- A personal Google account
- At least one Google app to connect

@techie.addy

steps 1 se 3

GET ACCESS

1 Check you are eligible

Use the list on the previous page. Google has **not stated an age or plan requirement for India**, so the store listing is the final word. If you cannot find the app, join the waitlist at **labs.google/dreambeans**.

2 Install the app

Open **Google Play** (Android) or the **App Store** (iPhone) and search for **Dreambeans by Google Labs**. Install it like any other app.

3 Sign in with Google

Use your **personal Google account**. In India, work or school (enterprise) accounts are not supported. Stories are visible only to the account holder.

steps 4 se 6

CONNECT APPS

4 Choose your Google apps

Setup asks permission to read from the apps you pick. **Connect at least one.** Google says it works best with all of them.

Gmail | Calendar | Photos | YouTube | Search history

SEPARATE FROM PERSONAL INTELLIGENCE SETTINGS IN GEMINI

5 Face Grouping (optional)

Onboarding may offer **Face Grouping** so the artwork reflects people you know. You can also enable it in **Google Photos > Settings > Group Similar Faces**. Skip it for **generic illustrations**.

6 Pick a story language

In India: **13 Indian languages** including Hindi, Punjabi, Tamil, Telugu and Bengali, plus English. Only **one language at a time**; no mixing.

steps 7 aur 8

WAIT, BROWSE

7 Let it brew

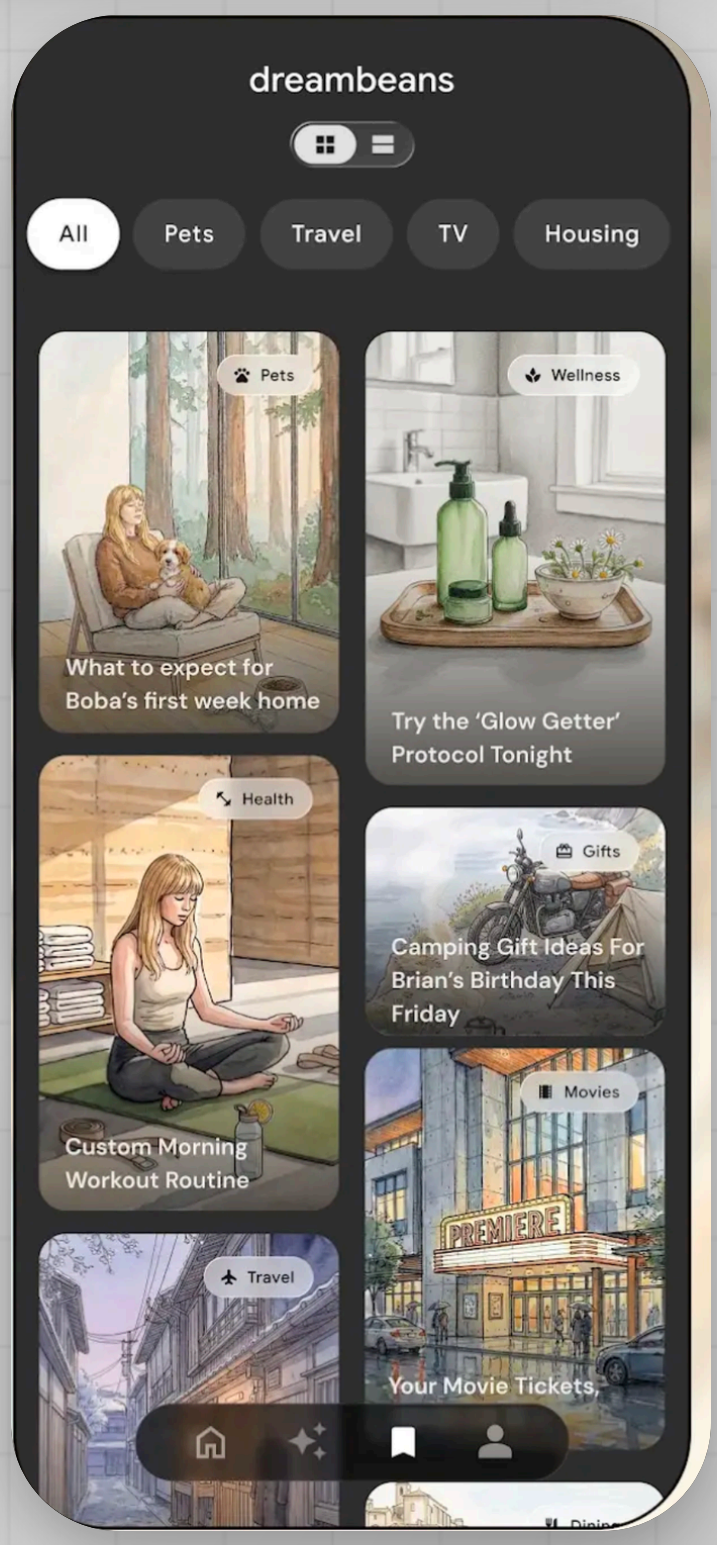

After setup the app **brews** your first set. A reviewer waited **nearly an hour**. No stories exist until it finishes, so come back later.

8 Browse today's set

Your stories show as **cards**. Topics include places to visit, things to try, events and subjects to explore. The set is **finite**, so you can reach the end.

Filter the grid

Chips along the top (**All, Pets, Travel, TV, Housing**) filter the cards. A switch toggles grid and list view.

HOME GRID IN THE APP

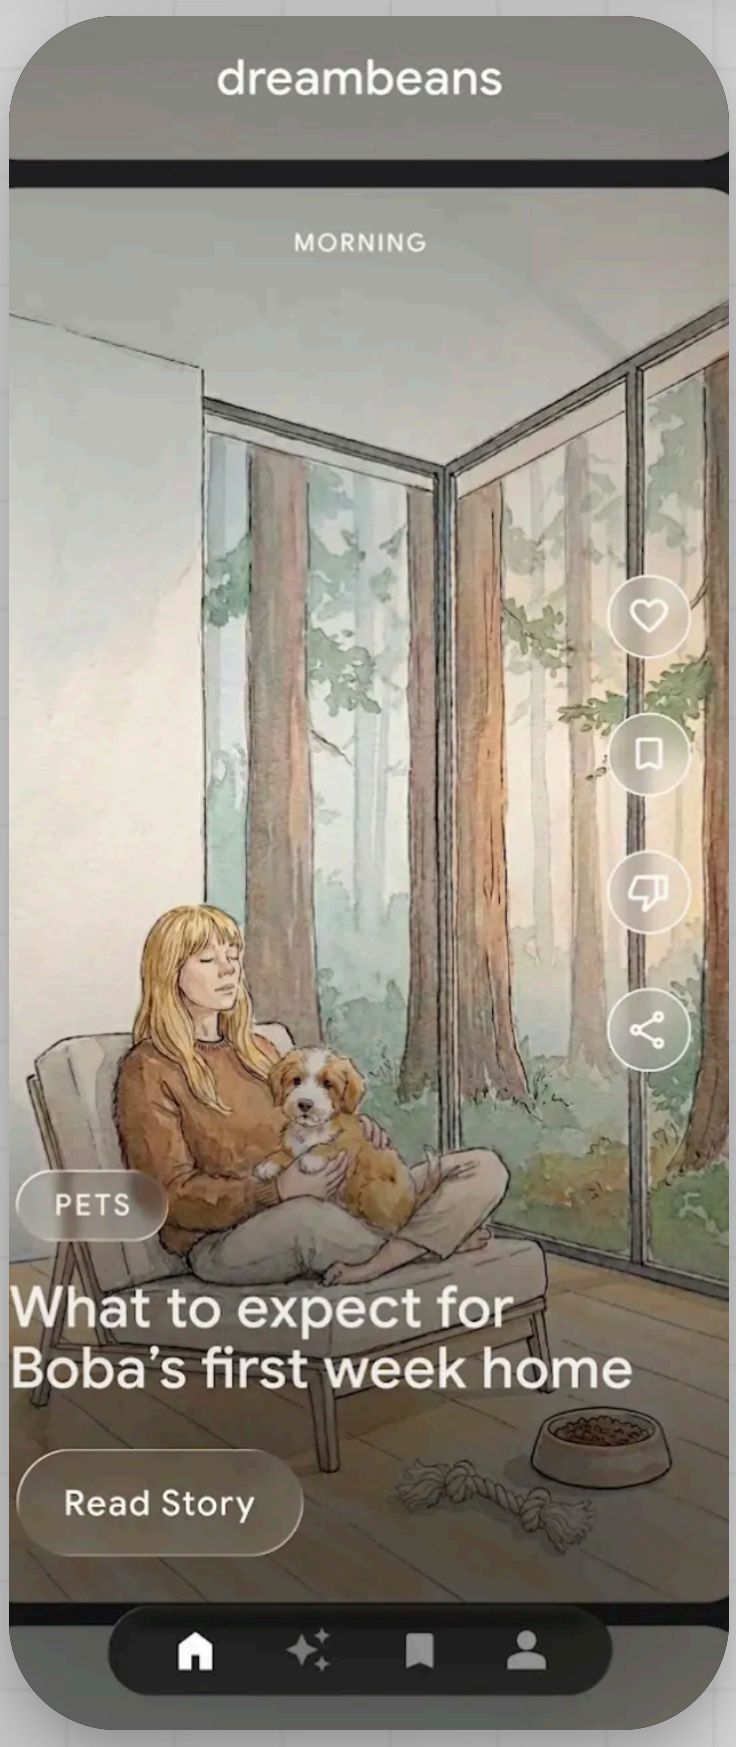

@techie.addy

steps 9 aur 10

READ, SAVE

9 Open a story

Tap a card, then **Read Story**. It is a short, roughly **30-second deep dive**. Tap to go deeper and Dreambeans pulls in info from the web to help you act, like finding a nearby class or park.

STORY VIEW IN THE APP

10 Save favourites

Use the **bookmark** to keep a story in your **library**, organised by categories such as Travel, Wellness, Pets and Tech.

Bonus: animation

In India, some stories can be **animated** with Google's Veo video model.

@techie.addy

steps 11 aur 12

TUNE, CONTROL

11 Tune your stories

- Give **feedback** on stories that do not fit; it shapes future sets
- Tell it about **new interests**, like a new hobby
- Ask it to **avoid or stop showing** certain subjects, including business-related info

12 Control your data

- **Disconnect** any Google app at any time
- **Delete** your Dreambeans data from inside the app
- Info you delete from a connected Google service is also removed from Dreambeans' personalization system, Google says

dhyan rakhna

GOOD TO KNOW

- It is an **experimental** Labs app, so features and rules can change.
- Proactive stories can sometimes bring up **upsetting memories**, such as people who have died. Google has acknowledged this.
- Not confirmed by Google's launch posts: exact menu names and locations, India plan or age requirements, and pricing.
