# UNSLOP SETUP

Unslop ek Claude Code aur Codex skill hai jo vibecoded, AI-looking UI ko ek designed interface mein badalti hai. Ye pehle slop dhoondti hai (purple gradients, glows, emoji labels, shouty copy, uneven spacing), phir direction set karti hai.

## 1 Repo clone karo aur skill copy karo

Claude Code ke liye (terminal mein):

```
git clone https://github.com/heydamir/unslop
mkdir -p ~/.claude/skills &&
  cp -r unslop/skills/unslop ~/.claude/skills/
```

Sirf ek project ke liye? Skill ko us project ke **.claude/skills/** folder mein copy karo.

## 2 Codex use karte ho?

Codex se seedha repo se install karwao:

```
$skill-installer install
  https://github.com/heydamir/unslop/tree/main/skills/
unslop
```

Ya haath se copy karo:

```
git clone https://github.com/heydamir/unslop
mkdir -p ~/.agents/skills &&
  cp -r unslop/skills/unslop ~/.agents/skills/
```

@techie.addy

## 3 Use kaise karna hai

Claude Code mein **/unslop** likho, Codex mein **$unslop**, saath mein batao kya chahiye:

```
/unslop this dashboard
/unslop the hero of https://example.com
/unslop my landing page and make the story video so I can post it
```

## 4 Skill kya karti hai

1. **Audit:** screen pe AI-slop dhoondhti hai.
2. **Direction:** aapke product ke hisaab se direction set karti hai, edit se pehle, taaki aap steer kar sako.
3. **Passes:** screen ko ek-ek pass mein fix karti hai, jaise designer redline review karta hai.

## 5 Live site ya story video chahiye?

Project directory se Playwright aur Chromium install karo:

```
npm install -D playwright
npx playwright install chromium
```

Story video ke liye **ffmpeg** bhi install hona chahiye (PATH mein).

### Kahin bhi chalta hai:

**Next.js** **React** **Vue** **Svelte** **Tailwind** **plain HTML + CSS**
