3 GITHUB REPOS

創

Kisi bhi style mein

UNLIMITED VIDEOS

I

HyperFrames

II

onetake

III

Lemo Opuscar

Step-by-step guide →

PEHLE YE SAMAJH LO

Teen repos, teen tareeke

Teeno repos Claude Code ke saath chalte hain. Tum Claude ko batate ho kya video chahiye, aur wo code likhkar video render kar deta hai.

Repo	Kya karta hai	Licence
HyperFrames HeyGen	HTML likho, MP4 video ban jaati hai. Titles, motion graphics, explainers ke liye.	Apache 2.0 local render free
onetake	Ek continuous take mein motion film, bina cut ke. Product launch aur app demo ke liye.	PolyForm Noncommercial commercial = Pro
Lemo Opuscar	59 film styles. Poori film code se banti hai, narration aur music ke saath.	MIT (code) demo films CC BY 4.0

Kaun sa kab use karein?

- **Jaldi motion graphics ya intro** chahiye: HyperFrames
- **App ya product ka demo**, ek smooth shot mein: onetake
- **Kisi style mein kahani** (watercolor, Ukiyo-e, Art Deco): Lemo Opuscar

github.com/lemomo-ai/lemo-opuscar

STEP 0 | EK BAAR KA SETUP

Pehle ye tools ready karo

Teeno repos ko ye cheezein chahiye. Terminal mein neeche ke commands se check karo.

1 Claude Code install ho

Terminal mein ye chalke dekho. Version aa jaye toh theek hai.

```
claude --version
```

2 Node.js, FFmpeg, Python aur Git

HyperFrames ko Node 22+, Lemo Opuscar ko Node 20+ aur Python 3.11+ chahiye. FFmpeg teeno ke liye zaroori hai.

```
node -v
ffmpeg -version
python3 --version
git --version
```

3 Ek folder banao aur Claude Code chalao

Apne videos isi folder mein banenge.

```
mkdir my-videos
cd my-videos
claude
```

Dhyan rakho

Koi command "not found" bole toh wo tool install nahi hai. Claude Code mein bol do: "mere system pe node aur ffmpeg install karne mein help karo."

REPO 1 | HEYGEN

HyperFrames

HTML likho, video render karo. Claude Code ke saath plugin ki tarah chalta hai.

1 Plugin install karo

Terminal mein (Claude ke bahar):

```
claude plugin marketplace add heygen-com/hyperframes
claude plugin install hyperframes@hyperframes
```

Dusra tareeka: `npx skills add heygen-com/hyperframes`

2 Claude se video maango

Claude Code ke andar `/hyperframes:hyperframes` use karo. README ka example prompt:

```
Using /hyperframes, create a 10-second product
intro with a fade-in title, a background video,
and subtle background music.
```

3 Reel ke liye vertical maango

Size ke baare mein saaf bolo:

```
Using /hyperframes, make a 20-second vertical
1080x1920 reel about <topic>: bold title,
3 animated points, captions at the bottom.
```

4 Ya khud CLI se chalao

Project banao, preview dekho, phir render karo:

```
npx hyperframes init my-video
cd my-video
npx hyperframes preview
npx hyperframes render
```

preview browser mein live reload ke saath dikhata hai. **render** MP4 banata hai.

REPO 2

onetake

Har scene pichle scene se grow hota hai, isliye poori film ek continuous take lagti hai.

1 Skill clone karo

```
git clone https://github.com/feitangyuan/onetake.git \
~/.claude/skills/onetake
```

2 Dependencies install karo

README mein sirf list hai: python3 ke saath playwright (chromium), numpy, scipy, Pillow, matplotlib, opencv-python, ffmpeg aur node. Ye standard commands hain:

```
pip install playwright numpy scipy Pillow \
matplotlib opencv-python
playwright install chromium
```

Narration chahiye toh faster-whisper aur Kokoro TTS bhi lagte hain. Music by default royalty-free hai.

3 Claude se film maango

README ke example prompts:

```
Make a 15 s launch video for my app

a feature demo rebuilt from these screenshots,
no screen recording

my motion video feels like a slideshow - fix it
```

4 Draft pehle, final baad mein

Draft 1080p30 mein aur final 4K60 mein render hota hai. README mein render commands nahi hain, toh Claude se bolo: "pehle draft render karo." Output kahan save hua, ye bhi Claude se poochh lo.

Commercial use?
onetake sirf personal, educational aur research use ke liye free hai. Brand ya paid kaam ke liye onetake Pro (onetakemotion.com) chahiye.

REPO 3 | LEMOLAB

Lemo Opuscar

59 film styles. Film poori code se banti hai, koi video generation model nahi.

1 Plugin install karo

```
claude plugin marketplace add lemomo-ai/lemo-opuscar
claude plugin install lemo-opuscar@lemolab
```

Ya clone karo: `git clone https://github.com/lemomo-ai/lemo-opuscar.git`, phir folder mein `claude` chalao.

2 Shuru karo

Kisi bhi folder mein ye likho. Wo bhasha aur kaam poochega:

```
/lemo-opuscar:lemo-opuscar
```

Ya seedha maango (README ka example):

```
Make a 45-second film in the watercolor style
about the coffee farm my family runs.
Warm female narrator.
```

3 Style chuno

Style ka naam English mein likho. Saari 59 styles `styles/README.md` mein hain, aur gallery lemomo-ai.github.io/lemo-opuscar par. Kuch styles: Ukiyo-e, Watercolor, Swiss Motion Graphics, Art Deco.

4 Storyboard pehle maango

Shuru karne se pehle wo poochta hai: topic ki details, apni voice ya music hai ya nahi, aur storyboard pehle chahiye ya nahi. Storyboard ke liye "yes" bolo.

5 Apna style banao (optional)

Ek line mein bolo:

```
Start from a blank page: a chalk-on-blackboard
style, warm and slow.
```

Saved styles `~/lemo-my-styles/` mein jaate hain.

Time, cost aur size

- Ek film mein lagbhag **30 se 60 minute** lagte hain aur kaafi tokens bhi.
- Styles **Claude Opus 5.5** ke liye tune hain. Doosre models mein style utna sahi nahi aa sakta.
- Default size **1920x1080 at 24 fps** hai. Reel ke liye bolo: "vertical 1080x1920 banao."
- Output: skill se chalao toh **jis folder se shuru kiya** wahin. Clone se chalao toh **films/<name>/** mein.

Update karna ho toh:

```
claude plugin marketplace update lemolab && \
claude plugin update lemo-opuscar@lemolab
```

REEL WORKFLOW

Idea se reel tak, 6 steps

1 Topic aur hook

Ek line mein likho: video kis baare mein hai aur pehla sawaal kya hai.

2 Script beats mein

Hook, problem, 3 points, CTA. Har beat ek chhota caption.

3 Storyboard approve karo

Claude se bolo: "pehle storyboard dikhao." Phir hi render.

4 Draft render

Pehle chhota draft dekho. Timing aur text check karo.

5 Vertical export

Size 1080x1920, 30 fps bolo. Captions video mein burn karwao.

6 Instagram par upload

Silent track rakho aur music ya voiceover Instagram mein daalo.

Copy-paste prompt template

```
Make a 30-second vertical (1080x1920) reel about
<topic>. Style: <style>. Structure: hook, 3 points,
CTA. Burned-in Hinglish captions, no voiceover.
Show me a storyboard first.
```

LAST PAGE

Licence, credit aur galtiyaan

Repo	Kya yaad rakhna hai
HyperFrames	Apache 2.0. Local render free, per-render fee nahi.
onetake	PolyForm Noncommercial. Commercial use ke liye Pro licence.
Lemo Opuscar	Code MIT. Tumhari banayi films tumhari hain, credit zaroori nahi. Unki **demo films** use karo toh CC BY 4.0 ke hisaab se LemoLab ko credit do aur repo ka link do. Teen demo voice tracks reuse mat karo (Game Show Flat, Paper-cut Lightbox, Broadcast News Package).

Agar kuch atak jaye

- **command not found**: Step 0 ke tools check karo (node, ffmpeg, python3).
- **Render fail hua**: poora error Claude ko paste karo aur bolo "isse fix karo."
- **Style sahi nahi aaya** (Lemo Opuscar): Claude Opus 5.5 par chalao.
- **Film slow hai**: Lemo Opuscar mein 30 se 60 minute normal hai.

Ye guide kab ka hai?
Commands aur details teeno repos ke README se (October 2026) liye gaye hain. Repos update hote rehte hain, isliye kuch fail ho toh GitHub par README ek baar dekh lena.
